Abstract

Most universities' current demands consist of university teachers' curricular and extra curricular activities registration. In general, universities' registrar office and employees record and register information manually. In the world of Internet, this is a really outdated method. University Internet networks must be taken advantage of. In this presentation, I will demonstrate a web-based system, which the ZRÍNYI MIKLÓS NATIONAL DEFENCE UNIVERSITY implemented in 2003. This system registers the teachers' curriculum hours. I will show the application solution method and the environment of this modern application framework. Using this framework, the university teachers' curricular activities' registration was solved efficiently and effectively.
