

# **NIIF Videoconference project**

Authors:

András Kovács, Tamás Máray, Mihály Mészáros

The aim of this lecture is to introduce all the development milestones of the NIIF Videoconference project done in the last year, the current state and a possible future of the project to the academic community.

The lecture will describe all the services available for videoconference users and applications used for managing and maintaining the network entities and services. Most important events of the past year will also be covered. We will identify the most popular and typical usage areas of videoconferencing systems in the Hungarian higher education and research community, furthermore we will also talk about our user experiences and prospective developments of the videoconference service. At last we will give a short summary on the latest advancements regarding NIIF streaming services.
