

On-line Computer Exam -- Methods and Experience

Laszlo Csirmaz
Central European University, Budapest

This Academic Year our department checked fresh student's computer skills by introducing an on-line Computer Proficiency Exam. We discuss how the exam material has been chosen, and why we decided to use a locally developed software. Details of the required material as well as the flow of the exam will be presented. The on-line exam was a good choice and we only had to modify some administrative arrangements. We show some statistics, and several tricks, such as disabling the print page function, which were employed -- successfully -- to prevent the leak of information about the exam material.
