

ETR CooSpace

Ács, Péter; Rós, László

Today ETR supports the whole education process, not only giving solutions for the organizing tasks of the higher education institutions. Among other new applications ETR offers cooperation space to support lectures and seminars directly. This application called CooSpace gives the opportunity for the students and lecturers, instructors to cooperate, both in graduate and postgraduate education forms or it can support flexible learning forms such as e-learning. In this application cooperation is in spotlight. It is not a methodology, but more like a bag of tools which can be appropriately selected by tutors, lecturers or organizers on the basis of the disciplinary field. One of the most tough element of supporting education is organizing a flexible but clearly manageable communication between participants. The system supports the transfer of the content, organizing and follow-up face to face meetings, handling educational tasks, gives virtual desk calendar and helps to sustain the communication process.
